

TO: F.D.A. - Docket 98N-1038₁₇₀₈ JUL 19 A11:50

The irradiation of all foods marketed in America
MUST be labeled as such. This is necessary
to preserve "choice" in the market place. At
present, no health studies support irradiation of our foods.
This technology should be disallowed in light of the
growing cancer epidemic — No radiation of foods.

It is broadly known, that the irradiation is used because
of unclean, high speed production plants, that exist in
the U.S. — Please clean-up the problems at the source.

Sincerely, John Giess
